

IMPORTANT NOTICE FOR ALL OUR FACEBOOK FRIENDS ABOUT CHLORINE DISINFECTANTS

We stock cases of chlorine (sodium hypochlorite) 10% strength - also known as pool sanitizer -for use in pond water treatment, sulfur water treatment, well water shock bacterial applications, etc. This chlorine is similar to household bleach, like Clorox, except it is twice as strong.

The panic buying of cleaning products has depleted the supply of chlorine bleach products in stores and we have seen price gouging and profiteering happening all over. There are reports of bleach selling for over \$80 per gallon.

We urge everyone to stay calm about this. We have decent supply of chlorine and do not anticipate any supply shortages. The entire water treatment industry is typically considered an essential industry.

We have 4 one gallon bottles of chlorine in a case for \$17.95. This is the regular, picked up, price for chlorine and is the price we have been charging since 2018. We will not price gouge! Normally we do not sell the gallons individually, but in these difficult times we will sell a one gallon jug for \$4.99. We only ask that you bring a bucket or box to carry the chlorine jug home in, so – if it were to tip – it would not ruin your car's upholstery.

- We will limit the sales to one case of chlorine per family per month, unless you are already one of our chlorine customers who need this for water treatment.
- Please bring a carrying container if you are getting chlorine by the gallon.
- We will maintain a sufficient supply of chlorine for our existing customers.
- We will **NOT** sell chlorine in bulk or wholesale to any merchant or anyone trying to profit at this time of crisis.

This is a helpful link on the use of bleach during this COVID19 crisis from the CDC:

<https://www.cdc.gov/coronavirus/2019-ncov/community/organizations/cleaning-disinfection.html>

Please remember that this product is twice as strong a household bleach so use half as much when sanitizing.

If you are a health care facility, public institution, or public service provider and have special needs for chlorine, please contact John Keener regarding your sanitizer requirements.
